

Abstract

Quality of Life of Widows after Chemotherapy and Radiotherapy Wenny Halim. (Henny E Wirawan, M.Hum, Psi., QIA); Bachelor degree programme, Tarumanagara University. (87 pages, p1-p4, R1-R10).

As a concept, Quality of life is quiet known in relation to patient with chronic diseases. Quality of life measurement is considered to be an important factor, which should not be skipped, in order to treat chronic diseases patients including head and neck cancer patient. Having such a good quality of life is sometimes considered to be spirits to give purposes to life and could give hope to survive if patients have cancer reoccurrence in the future. This research aim to give reflection and explanations about the quality of life of widows after chemotherapy and radiotherapy. From this research we could see that subject having changes in their quality of life. Changes in physics and functional is the biggest changes, but they are having a lot of new positive view in *psychological well being*.

Keywords: quality of life, head and neck cancer, widows, after chemotherapy and radiotherapy.
