Self discrepancy of gay who are rejected by his family. (Miniwaty Halim, M. Psi.; Dra. Ninawati, MM); Undergraduate Program in Psychology, Tarumanagara University. (125 pages, R1-R3, Appendix 1-50).

This purpose of this research is to find out about the self discrepancy of gay who are rejected by his family. The subjects consist of six gay between the ages of 21-33 years old. Self discrepancy using Higgins's theory. Self discrepancy is the problem that arises when there is a conflict or inconsistency between the actual self someone with the ideal self or ought self related to the individual and the individual beliefs of others against his assessment. The results of this study illustrate that all subjects experience rejection from family because of their gay identity and experience the discrepancy actual own vs ideal and ought other. The study found that all subjects reduce the discrepancy with highlight the advantage on work and five subjects reducing the discrepancy with leaving the environment that cause a discrepancy.

Key words: Discrepancy Self, Gay, Family, Rejected.
