Psychological well-being difference on late adolescent based on identity status (Dr. Fransisca Iriani Roesmala Dewi, M.Si.); Majoring in Psychology, Undergraduate Programme, Tarumanagara University (72 pages, P1-P4, L1-L64)

This research aims at determining the difference of late adolescent's psychological well-being according to one's identity status. Psychological well-being has something to do with things that has been achieved by an individual therefore making him/her feels prosperous and happy. Identity status defines as states of ego development that depend on the presence or absence of crisis and commitment. One who has already achieved his/her own identity will feel happy and has a high level of psychological well-being. Data were collected from 173 late adolescents divided into four identity status, which are diffusion, foreclosure, moratorium, and achievement. This research using quantitative method and a questionnaire as the tool for data collection. The data was analyzed by One-Way ANOVA. The result indicated that there is no difference on late adolescent's psychological well-being between four identity statuses, $F(3) = 1.916, p > 0.05$. The result revealed that participants from diffusion, foreclosure, moratorium, and achievement groups have the same level of psychological well-being.

Key Word: Psychological Well-Being, Identity Status, Late Adolescent
