

## ABSTRACT

**VERA YUNITA TJENDRA**

**Correlation between perception of premarital sex and anxiety of AIDS at adolescence in Jakarta (Denrich Suryadi, M.Psy. & Dra. Ninawati, MM); psychological study program, strata one undergraduate program, University of Tarumanagara. 56 page, P1-P6, L1-L21.**

The purpose this research is to analyze correlation between perception of premarital sex and anxiety of HIV/AIDS at adolescence in Jakarta. Perception is about how to someone sees the wide world depends on his/her personal experience. Anxiety is a feeling of fear and being very worried about something. The concepts of anxiety in this research are used in this study based on somatic symptoms, cognitive symptoms, emotional symptoms, and behavioral symptoms. This research takes 181 subject through convenience technique. The result of this research is that there is positive correlation between perception of premarital sex and anxiety of HIV/AIDS ( $r=0.429$ ,  $p<0.05$ ). It means, adolescence who had a positive perception about premarital sex will feel an anxiety of HIV/AIDS.

**Keywords: adolescence, perception, premarital sex, anxiety.**
