**The Children Perception against Parental Conflict and the correlation with Children Happiness Level. (Yohanes Budiarto, S.Pd.,M.Si). Undergraduate Program in Psychology Tarumanagara University. (40 pages, R1-R4, Appdx 1-30).**

The purpose of this study was to determine how the children perception against parental conflict and the correlation with children happiness level. This study included 100 children in the range 11-13 years and domiciled in West Jakarta using accidental sampling technique. Using the Spearman correlation in SPSS 16 version, the result is  $r = -0.0111$  dan  $p = 0.271$ , which means there is no significant correlation between perception of parental conflict and children happiness. Then, the result for the correlation between dimension of conflict properties and children happiness is  $r = -0.383$  dan  $p = 0.000$ . It means there is a significant correlation between conflict properties and children happiness. The higher the characteristic of parental conflict, the lower the children happiness is and vice versa. the lower the characteristic of parental conflict, the higher the children happiness is.

Keywords: perception, children happiness, middle childhood.
