Hubungan antara *Psychological Capital* dan *Subjective Well-Being* pada Remaja; Dr. Rostiana, M.Si, Psi. Program Studi S-1 Psikologi, Universitas Tarumanagara, (i-xii; 55 halaman; P1-P5, L1-L26).

This research was conducted to look at the relationship between psychological capital and subjective well-being in adolescence. Data used amounted to 111 students aged 18 to 21 years old who is an adolescent male or female. Spearman correlation test results found the value of $r = 0.362$ and $p = 0.000 < 0,01$, indicating presence of positive and significant relationships between psychological capital and subjective well-being in adolescence. The results of this research show the higher the psychological capital of teenagers will then improve subjective well-being in themselves, otherwise the lower psychological capital owned by the teens, then subjective well-being has also be getting lower.

Keywords: Psychological Capital, Subjective Well-being, Adolescents
