Quality of Life of Volunteer Who Experienced Vicarious Trauma; Dr. Fransisca Iriani Roesmala Dewi, M. Si; Undergraduate Program in Psychology, Tarumanagara University, (i-ix; 123 pages; P1-P5; L1-L23).

Quality of life is individual's perception of their position in life in the context of the culture and value systems in which they live and in relation to their goals, expectations, standard and concerns. It is a broad ranging concept affected in a complex way by the person's physical health, psychological state, social relationships and their relationship to salient features of their environment. This research aim to describe quality of life of volunteer who experienced vicarious trauma. This study involved 4 disaster volunteers with high criteria of vicarious trauma. The method that is used on this study is qualitative method, using criterion sampling. Measuring instrument used is Secondary Traumatic Stress Scale. This study lasted for three months, started from February 2016 until April 2016. The results show that the four subjects have a dimension of quality of life, specifically physical health, social relationships and their relationship to salient features of their environment, except psychological state.

Keywords: Quality of Life, Volunteer, and Vicarious Trauma
