University, (i-xi, 59 pages, R1-R3, Appdx 1-47).**

The aim of this research is to know the correlation between big five personality with self adjustment in student nomads. This study involved 67 student nomads universities in Jakarta using accidental sampling and snowball sampling. This study is using correlational design of quantitative method and analyzing with Spearman correlation. The results are openness to experience  $r(67) = 0.185$  and  $p = 0.133$ , conscientiousness  $r(67) = 0.420$  and  $p = 0.000$ , extraversion  $r(67) = 0.423$  and  $p = 0.000$ , agreeableness  $r(67) = 0.538$  and  $p = 0.000$ , and neuroticism  $r(67) = -0.288$  and  $p = 0.018$ . The result indicates that there are significant positive correlation between conscientiousness, extraversion, and agreeableness with self adjustment. Openness to experience showed a positive correlation but not significant with self adjustment. Whereas neuroticism showed a significant negative correlation with self adjustment.

**Keywords:** big five personality, self adjustment, student nomads.
