

ANALISIS PENGARUH GOOD CORPORATE GOVERNANCE DAN RASIO
KEUANGAN TERHADAP PREDIKSI KONDISI FINANCIAL DISTRESS PADA
PERUSAHAAN MANUFAKTUR YANG TERDAFTAR DI BURSA EFEK
INDONESIA 2012-2014

Oleh : Christian

This research's purpose is to know if the institutional ownerships, managerial ownerships, audit committee, return on assets, and total assets turnover have impacts on the prediction of company's financial distress. This research is focused on the manufacture companies that are listed in Bursa Efek Indonesia in 2012 — 2014 period of time. Those companies will be tested with logistic method using SPSS v23 program.

This research is using secondary data which was gathered by doing library research and data documentation study. Library research was done by collecting and learning all data and theories form journals, books, and literatures about this research's topic. Data documentation study was done bu collecting sample companies' financial reports. After the data was gathered, they would be analyzed with logistic regression analyzation, goodness of fit test, overall fit model test, Cox and Shell's R Square and Nagelkerke R Square, and significance tes or wald test. The analyzation techniques were done with an assumption the multivariate normal distribution is not fulfilled.

The research's results show that institutional ownerships variables and managerial ownerships variables have significant impacts on prediction of financial distress of a company. However, the other variables such as audit committee, return on assets, and total assets turnover have significant impacts on the prediction of company's financial distress. Companies are expected to watch over other factors that could be impactful on financial distress for their own financial safety.

Keyword : Institutional ownerships, managerial ownerships, audit committee, return on assets, total assets turnover, financial distress.
