

Abstrack

Urban forests are one of the most important parts in urban areas. With urban physical development that continues to occur makes it difficult and expensive to add urban forests. Whereas urban forests have important benefits for urban communities, such as providing a balance to ecosystems, as water catchment areas, and being a place of carbondioxide to oxygen cycles. One of the urban forests in Jakarta is Hutan Kota Srengseng. In this research, we want to find out whether Hutan Kota Srengseng meets the criteria so that it is worth mentioning as an urban forest. The method used in this research is qualitative, field observations and literature studies. The results of this study will find out the ecosystem services provided by the Hutan Kota Srengseng and the potential that exists in the Hutan Kota Srengseng so that they can make optimal plans for developing and managing Hutan Kota Srengseng in the future.
