FOREWORDS
CHAIRMAN OF THE ORGANIZING COMMITTEE

First of all let's pray and say thanks to God for giving us His mercy and blessings.

The development of technology nowadays is growing up so fast. It aims to meet the necessary of the community to get a better life. Technological innovation which needed to develop technology products that can help people in improving their lives. Therefore the academics are not only required to implement the learning process, but also have to do research and community service to produce innovative scientific research.

Indonesian academics today are eager to involve in research activities. Therefore we required a scientific forum for mutual discussion, exchange information about the research that has been carried out especially related to Urban Engineering.

Faculty of Engineering, University of Tarumanagara conducts the second international conference to bring the academics, researchers to develop their knowledge and exchange ideas so that the researchers can improve the results of research that has been done. The conference called the 2ndInternational Conference on Engineering Tarumanagara, 2015, which is held on the Auditorium at the 8th floor of M Building, Campus I, University of Tarumanagara from 22 to 23 October 2015. The ICET 2015 conference theme is Urban Engineering for Future Generations. Future generations as the frontier of national development should be prepared from now on, along with the necessary infrastructure. The role of technology is to support the enhancement of the ability of future generations. This event includes to the presentation of scientific papers by keynote speakers, parallel sessions presenting papers of academics and research poster exhibition.

The more extensive the information obtained, the more knowledge that we gained. Some papers submitted by researchers and academics from different countries such as, Germany, Malaysia will enrich the science and technological development.

This conference proceedings contain the full text of all papers presented International Conference on Engineering of Tarumanagara 2015. Papers are categorized based on Engineering disciplines set by the organizing committee. Then, the presentation is divided into parallel sessions.

On this occasion I would like to thank to: Foundation of Tarumanagara, Rector of Tarumanagara University, Dean of Faculty of Engineering Tarumanagara University and Sponsors of ICET 2015, for the support and help that has been given. I also would like to thank the authors for their contributions.

Finally I would like to apologies if there are deficiencies in the activity. Thank you for all the attention.

I Wayan Sukania, S.T., M.T.
Chairman of the Organizing Committee

FOREWORDS
DEAN OF FACULTY OF ENGINEERING

I would like to warmly welcome all participants of the 2nd International Conference on Engineering of Tarumanagara (ICET 2015). This conference is organized by Faculty of Engineering, Tarumanagara University. The main aim of this conference was to respond the problem related to urban engineering for future generation. As this conference was designed to gather scientists, engineers, practitioners, and industries in engineering related disciplines, I expect intense discussion will happen among them so that some brilliant ideas to be used to improve the quality of human life can be produced.

I hope this conference will create an international networking and collaborating, especially in engineering research and publication.

I would like to congratulate the organizing committee of ICET 2015, for their outstanding efforts. I would also like to express my gratitude to the sponsors for their contributions in making this conference a resounding success.

I wish the International Conference on Engineering of Tarumanagara (ICET 2015) a very useful and fruitful occasion.

Thank you for your attention and contribution.

Prof. Dr. Agustinus Purna Irawan
Dean of Faculty of Engineering

SCIENTIFIC COMMITTEE

1. Dr. Harto Tanujaya Tarumanagara University, Indonesia (Chair)
2. Prof. Hui Ming Wee Chung Yuan Christian University, Taiwan
3. Prof. Satoyuki Kawano Osaka University, Japan
4. Prof. Robert Vale Victoria University of Wellington, New Zealand
5. Prof. Brenda Vale Victoria University of Wellington, New Zealand
6. Dr. Ing. A. Rugerri Toni L. Karlsruhe Institut für Technologie, Karlsruhe Germany and Atma Jaya Catholic University of Indonesia, Indonesia
7. Dr. Sie Teng Soh Curtin University, Australia
8. Dr. Thomas Marconi Delft University of Technology (TU Delft), The Netherlands
9. Prof. Yahaya Ahmad University of Malaya, Malaysia
10. Prof. Nasir Bin Daud University of Malaya, Malaysia
11. Prof. Mohd. Zulkifly b. Abdullah Universiti Sains Malaysia, Malaysia
12. Prof. Zaidi Mohd. Ripin Universiti Sains Malaysia, Malaysia
13. Dr. Ing. M. Razi Abdul Rahman Universiti Sains Malaysia, Malaysia
14. Dr. Ing. Joewono Prasetijo Universiti Tun Hussein Onn, Malaysia
15. Dr. Mohamed Azlan Suhot Universiti Teknologi Malaysia, Malaysia
16. Dr. Bambang K. Hadi Bandung Institute of Technology, Indonesia
17. Prof. Indarto University of Gadjah Mada, Indonesia
18. Prof. Jamasri University of Gadjah Mada, Indonesia
19. Prof. Tresna P. Soemardi University of Indonesia, Indonesia
20. Prof. I Made Kartika University of Indonesia, Indonesia
21. Prof. Danardono A. S. University of Indonesia, Indonesia
22. Prof. Eddy S. Siradj. University of Indonesia, Indonesia
23. Prof. Dr. Ir. Teuku Yuri M. Zagloel University of Indonesia, Indonesia
24. Dr. Yono Reksoprodjo University of Indonesia, Indonesia
25. Prof. Tjokorda Gde Tirta Nindhia Udayana University, Indonesia
26. Prof. Ngakan Putu Gede Suardana Udayana University, Indonesia
27. Prof. I Gusti Bagus Wijaya Kusuma Udayana University, Indonesia
28. Prof. Kuncoro Diharjo Sebelas Maret University, Indonesia
29. Prof. I Nyoman Pujawan Sepuluh November Institute of Teechnology, Indonesia
30. Prof. Hadi Sutanto Atma Jaya Catholic University of Indonesia, Indonesia
31. Dr. Iftikar Z. Sitalaksana Bandung Institute of Technology, Indonesia
32. Prof. Tri Harso Karyono Tanri Abeng University, Indonesia
33. Dr. Rianti Ariobimo Trisakti University, Indonesia
34. Prof. Roesdiman Soegiarso Tarumanagara University, Indonesia
35. Prof. Chaidir A. Makarim Tarumanagara University, Indonesia
36. Prof. Agustinus Purna Irawan Tarumanagara University, Indonesia
37. Prof. Leksmono S Putranto Tarumanagara University, Indonesia
38. Dr. Adianto Tarumanagara University, Indonesia
39. Dr. Agustinus Sutanto Tarumanagara University, Indonesia
40. Dr. Danang Priatmodjo Tarumanagara University, Indonesia
41. Dr. Naniek Widayati Tarumanagara University, Indonesia
42. Dr. Titin Fatima Tarumanagara University, Indonesia

ORGANIZING COMMITTEE

Chairman

I Wayan Sukania, S.T., M.T.

Vice Chairman

Imma Sofi Anindyta, S.T., M.Arch.

Conference Secretariat

M. Agung Saryatmo, S.T., M.M.

PROGRAM OVERVIEW

Thursday, 22 October 2015

No	Time	Program
1	08.30-09.00	Registration
2	09.00-09.30	Opening Ceremony
		a) Balinese Welcome Dance
		b) National Anthem + Mars Tarumanagara
		c) Chairman Speech
		d) Opening by Vice Rector of Academics and Student Affairs, Untar
e) Photo Session (WRA, Dean, Chairman, Keynote Speakers, Presenters, Sponsors)		
3	09.30-09.40	Sponsorship Presentation
4	09.40-11.40	Keynote Speaker 1: Prof. Zaidi Mohd. Ripin University Sain Malaysia, Malaysia
		Keynote Speaker 2: Ir. Irwansyah. Industrial Estate Association of Indonesia (Himpunan Kawasan Industri) Head of Environmental and Spatial Planning
5	11.40-11.50	Appreciation to Keynote Speakers, Moderator, Sponsors)
6	11.50-12.00	Sponsorship Presentation
7	12.00-12.10	Technical Information
8	12.10-13.00	Lunch
9	13.00-15.00	Parallel Session I
10	15.00-15.30	Coffee Break
11	15.30-17.00	Parallel Session II

Friday, 23 October 2015

No	Time	Program
1	08.30-09.00	Registration
2	09.00-11.00	Parallel Session III
3	11.00-11.15	Closing Ceremony
4	11.15-12.00	Lunch

Invited Papers

Development of Low Frequency Electromagnetic Vibration Energy Harvester <i>Wan Masrurah Hairudin, M. Izudin Alisah, Chan Ping Yi, Tan Yee Hern, Zaidi Mohd Ripin</i>	1-8
---	-----

List of Papers - Architecture

Paper ID	Title Author/Authors	pp
AE-01	Catholic Church: Influence of Liturgical Ritual in the Building Design (Studied on Four Catholic Churches in DKI Jakarta Area) <i>Rudy Trisno, Sugiri Kustedja</i>	1
AE-02	Performance Analysis in Home Industry Scale Production of Modified Traditional Brick as Green Building Material With Reed as Filler <i>Kurniati Ornam, Masykur Kimsan, La Ode Ngkoimani</i>	1-8
AE-03	The Study of Defense Space on Chinatown Petak Sembilan, West Jakarta <i>Nafi'ah Solikhah</i>	1
AE-04	Survey on the Fulfillment of the Construction Requirements for Non-Engineered Houses in North Sumatra <i>Darwin</i>	1
AE-05	Reveal Knowledge Pacitan Rural Java Architecture <i>Triyuniastuti, HB Satrio Wibowo, Sukirman</i>	1
AE-06	Uniqueness Omah Dudur Dawa Architecture <i>Satrio HB Wibowo, Sudaryono, E. Pradipto</i>	1
AE-07	Global and Local, at the Same Time <i>Franky Liauw</i>	1
AE-08	Conducting Smart Programs in the Old Kampoeng Beyond the Modern Era City of Surabaya <i>Danny Santoso Mintorogo Wanda K. Widigdo, Liliany S. Arifin, Anik Yuniwati</i>	1
AE-09	Adaptation to Climate Change as the Controller of Disaster Vulnerability in Coastal Settlements in Mempawah Hilir, West Kalimantan <i>Ely Nurhidayati</i>	1
AE-10	Study of Staircases Design and Visitors' Perception at Commercial Building <i>Siti Belinda Amri, Santi, La Ode Abdul Syukur, Aspin</i>	1-8

Paper ID	Title Author/Authors	pp
AE-11	Greenship Rating of Wood Materials in Building <i>James Rilatupa</i>	1-9
AE-12	Study of Bioclimatic Application to the Spatial Habitation Along the River Bank Ciliwung <i>Handajani Asriningpuri, Ratih Budiarti, Harlisa</i>	1-8
AE-13	Public Engagement in Public Space as the Elements of City Branding <i>Olga Nauli Komala</i>	1
AE-14	Bornean Long House: Cosmological Value in Socio-Cultural Transformation Stream <i>Klara Puspa Indrawati</i>	1-10
AE-15	Potential Tour Toward Village of Cultural Conservation of Baluwerti, Surakarta, Jawa Tengah, Indonesia <i>Naniek Widayati Priyomarsono</i>	1-10

List of Papers - Civil Engineering

Paper ID	Title/Author/Authors	pp
CE-01	The Understanding and the Use of Motorcycle Special Stopping Space in Signalized Intersection <i>Leksmono Suryo Putranto, Minggaza Suhindra</i>	1-5
CE-02	Identification of Volcanic Rocks in Imogiri Yogyakarta Based on Subsurface Geologic Data <i>Winarti, Hill Gendoet Hartono</i>	1-9
CE-03	Model Test of Influence Groundwater Pumping to Decrease Surface of the Land <i>Nurnawaty, M. Selintung, M.Arsyad Thaha, F. Marikar</i>	1-5
CE-04	Analysis on the Needs of Bike Share in Institut Teknologi Sepuluh Nopember Surabaya <i>Siera Rozanah, Ervina Ahyudanari</i>	1
CE-05	Flexural Behavior of Bamboo Reinforced Concrete Beams <i>Ika Bali, Erianto Wijaya</i>	1-6
CE-06	Identification of Hazardous Road Sections Using Over Dispersion-Excess Zero Data of Vehicle Accident at Johor Federal Roads <i>Joewono Prasetijo, W Zahidah Musa, Zaffan Farhana Zainal</i>	1-6
CE-07	Speed Profile Based on Design Consistency <i>Joewono Prasetijo, Zaffan Farhana Zainal, W. Zahidah Musa</i>	1-6
CE-08	DAB as an Effective Dispute Resolution in Construction Industry <i>Purnomo</i>	1
CE-09	Analysis Energy Consumption and Price of Fuel Truck in Makassar <i>Mukhtar Lutfie, Lawalenna Samang, Sakti Adji Adisasmita, Isran Ramli</i>	1-9
CE-10	Influence of Economic External Factors on Construction Project Duration Identification <i>Basuki Anondho, Yusi Yusianto, Jemmy Wijaya</i>	1-6
CE-11	Analysis of the Influence of Longitudinal Beam Toward the Concrete's Nominal Shear Strength <i>Daniel Christianto, Fannywati Itang, Widodo Kushartomo, and Irene Natasha Kosasih</i>	1-6

Paper ID	Title/Author/Authors	pp
CE-12	Stabilization of Marine Dredged Sediment With Hydraulic Binders and Silica Fume <i>Ernesto Silitonga</i>	1

List of Papers - Electrical Engineering

Paper ID	Title/Author/Authors	pp
EE-01	Sentiment Classification for Academic Questionnaire Using NBC and SVM <i>Amir Hamzah, Naniek Widyastuti</i>	1-8
EE-02	GUI Applications on Ground Segment Research Rockets <i>Imam Sampurno Nugroho, Yahan Nuryad, Nanniek Andiani, Yohannes Dewanto</i>	1
EE-03	Document Subjectivity and Target Detection in Opinion Mining Using HMM Pos-Tagger <i>Amir Hamzah, Naniek Widyastuti</i>	1
EE-04	Analysis, Simulation and Implementation of Linear Block Codes Using a Microcontroller <i>Joni Fat</i>	1-7
EE-05	Visual Performance of Tunnel Lighting Along the Jakarta Outer Ring Road <i>Endah Setyaningsih, Jeanny Pragantha</i>	1-8
EE-06	Microcontroller Based Speed Controller of One Phase Induction AC Motor in Escalators <i>Hadian Satria Utama, Edward Naulibasa Lie, Pono Budi Marjoko</i>	1-8
EE-07	Implementation Hadoop on Private IaaS Cloud Computing <i>Edy Kristianto</i>	1-6

List of Papers - Industrial Engineering

Paper ID	Title/Author/Authors	pp
IE-01	Rapid Tooling Manufacturability Advanced Materials Using Automation Fuzzy-AHP Method for Injection Gyro-Magnetic Hot Mold <i>Moh. Hardiyanto</i>	1-6
IE-02	Workload Analysis of Manually Operator at Clean and Tidy Car Wash <i>Indra Suriyanto, I Wayan Sukania and Lamto Widodo</i>	1-10
IE-03	Designing a "Voice of Customer" Program to Support Knowledge-Based-QFD <i>Ronald Sukwadi, Mokh. Suef, Enny Widawati, Cynthia Giovany</i>	1-8
IE-04	The Strategy for Improving the Quality of Printing Film Production at PT X <i>Lithrone Laricha S, Delvis Agusman, Lucky</i>	1-8
IE-05	Research Comparison Among Business Incubator Research Sample and Analysis in the World <i>Lina Gozali, Maslin Masrom, Habibah @ Norehan Haron, Teuku Yuri M. Zagloel</i>	1-7

Paper ID	Title/Author/Authors	pp
IE-06	Developing Algoritm to Design Jig & Fixture in SME Supporting Industry Based on Quality Function Deployment Methods (Case Study: Design Assy Machine and Leakage Testing Machine for Air Brake Coupling Hose) <i>Cucu Wahyudin, Aan Mintarsih</i>	1-7
IE-07	Comparison of Modular Layout and Distributed Layout Using Simulation Approach <i>Trifenaus Prabu Hidayat, Andre Sugioko</i>	1-8
IE-08	Optimization Replacement Schedule of Chisels Based on Quality Cost With Exponentially Increasing Failure Rate <i>Dadang Arifin</i>	1-6
IE-09	Re-Design The High of Handlebar on Semarang's Bus Rapid Transit Using Anthropometry and Ergonomy Approach <i>Annissa Lutfiah Hatuwe, Annisa Nindya Putri, Hanung Kurniawan, Reza Prisman</i>	1-6
IE-10	Optimization of Production Planning Using Goal Programming Method (Study in a Cement Plant) <i>Syamsul Anwar, Lonny Afrizalmi</i>	1
IE-11	Risk Assessment of Distal Upper Extremity by Strain Index Method in a Small Shoes-Making Industry <i>Syamsul Anwar, Yuri Fandi Tanjung</i>	1
IE-12	The Effect of Working Environment Conditions on Employees' Job Satisfaction in a Palm Oil Industry <i>Elsa Febriani, Musdirwan, Syamsul Anwar</i>	1
IE-13	Improvement of Service Performance in PO. Sandy Putra by Implementation of Safety Management System for Public Transport <i>Hanung Kurniawan</i>	1-7
IE-14	Designing a Closed Loop Tutelage System to Support Student in Preparing and Executing the Study Plan <i>Andrijanto</i>	1-8
IE-15	Design of Eco-Friendly Dairy Farm Business Plan Using Business Canvas Model <i>Meity Martaleo, William Bobby Susanto, Marcellia Susan</i>	1
IE-16	Heuristic Model With Discritized Time Horizon for Solving Alternative Machine Scheduling Problem on Single Operation <i>Irwan Sukendar</i>	1-6
IE-17	Simulator of Pitot Tube, Using The Sensor MPX5100 in an Aircraft Model <i>Joko Sugiarto, Dwijati, Hendardi, Yohannes Dewanto</i>	
IE-18	Ergonomic Aspect of Physical Environment in Junior High School (Between Individual Comfort and Saving Energy Behavior) <i>Lamto Widodo, Fransisca Iriani, Endah Setyaningsih</i>	1-12
IE-19	Embodiment Design of High Capacity Mixer (Case Study : Steamed Sponge Cake Production at "M" Home Industry) <i>Adrian Christiady, Vivi Triyanti</i>	1-9
IE-20	The Comparison of MTM-1 and MOST in Predicting Work Element Time <i>Ioana Theresia Libardus, Vivi Triyanti</i>	1-8

List of Papers - Mechanical Engineering

ANALYSIS, SIMULATION AND IMPLEMENTATION OF LINEAR BLOCK CODES USING A MICROCONTROLLER

Joni Fat¹⁾

¹⁾Tarumanagara University, Jl. Let. Jend. S. Parman No. 1, Jakarta Barat - 11460, Indonesia

e-mail: jonif@untar.ac.id

Abstract

Linear Block Code (LBC) is a method which is used to detect and correct an error in data transmission through communication channel. In this research, LBC was simulated by using two software simulators and then was implemented in a hardware which was based on microcontroller. We have tested these simulators and device. We concluded that they could run well. The bit transfer rate in the hardware device is 2 bit/s. Hence this is a low rate, but it is needed in order that user could manipulate error manually in the time of data transfer. This device also had another limitation, i.e. the type of data error. The type of data error that could be made during data transfer limited only to the flipping from 1 to 0. Implementation by using ATMEGA 8 gave another limitation which was the maximum size of G matrix. So, user could only input the size of G matrix as large as $m=10$ and $n=10$. This limitation was caused by the size of data memory in ATMEGA 8 which was 2 KB. We could solve this particular problem by using external memory or using a higher microcontroller specification.

Keywords: ATMEGA 8, error correction and detection, LBC, microcontroller, simulator.

INTRODUCTION

The discovery of a vacuum tube marked a new era in modern computing. John Mauchly started the design of a general-purpose computer using the vacuum tubes. The next era was marked by the discovery of a transistor. The advantages of transistor are smaller, cheaper and more efficient in power usage compared to the vacuum tube. It can be said that invention of the transistor was the one that started modern era in the design of computing machines. The invention of the transistor allowed an integrated circuit (IC) to emerge, because such components can be fabricated directly from a semiconductor material such as silicon. As a result, the components could be developed from a very thin wafer form. This technology allowed the integration of the components in a very small size and also compact. This is the IC.

In this current era and the incoming era, IC design challenges still remain in the same issues, such as size, speed, and density. Only because of the limitations of the most fundamental — in this case — the matter itself, then by the development of fabrication techniques which have reached the size of nanometer, will meet its own limitations. This limitation will lead to the issue of reliability. Energy consumption will reduce, but intrinsically become unreliable. Therefore, we need a new error handling method, effective and efficient. This new error handling method is generally known as Linear Block Codes (LBC).

INFORMATION THEORY

Information theory was first introduced by Claude E. Shannon in The Bell System Technical Journal under the title of *A Mathematical Theory of Communication* in 1948. Shannon is one of the engineers in Bell Telephone Laboratories, hence, this work, although was focused on information, it was understandable that it was meant to telephony system. By Weaver, this concept was developed that it could be applied to all communication

system.

Furthermore, with the development of today communication technology, and also the development of computing technology, the boundaries between communication and computing itself has been converged. Thus, a form of communication that looks invisible like using telephone lines, computer networks, cellular networks, and so on, had been distorted. It is like communication that occurs in a chip or electronic circuit. This form of communication is simpler, but requires a higher accuracy. Because the interpretation is done in the lowest level. However, Shannon's theory is still relevant because it provides some rules and restrictions that can be followed.

In some cases, this theory requires adjustment, such as the need for a feedback. Based on Shannon and Weaver's paradigm for point to point communication¹, changes the paradigm of public communication at that time. The paradigm adds an observer which is capable of providing data correction when an error occurs. Observer in this case could be a codec mechanism with a correction capability. This data correction capability needs to be done with a method that is concise and precise and do not overload the system. One candidate methods that can be used further - but requires further research - is Low Parity Density Code (LPDC)². This code is part of a block of code that is widely used in channel coding. With a low data density, but could achieve Shannon's limit.

**LBC
 GENERATOR MATRIX**

Linear code is a vector space, where each code word is a vector. Thus, the set of vectors with n-length is called LBC if and only if the set is a subspace of a vector space of n-tuples. Matrix representation of this code is an ideal way in order to describe it. A linear code with a size of (n, k) is expressed by the matrix generator, **G** with dimension of **k x n**. Each line **G** is an **n**-tuple, and each column is a **k**-tuple.

Therefore, row space of matrix **G** is a set of base vectors for **k**-dimensional subspace. Every code word, **c** is a linear combination of the rows of **G** based on the information data **d** = (d₀, d₁, ..., d_{k-1}), then

$$\mathbf{c} = \mathbf{d}_0\mathbf{g}_0 + \mathbf{d}_1\mathbf{g}_1 + \dots + \mathbf{d}_{k-1}\mathbf{g}_{k-1} \dots\dots\dots (1)$$

with **d_i** (0 < i < k-1), represent bits of information; and **g_i** (0 < i < k-1), is a row vector of **G**. Encoding procedure can be represented in matrix form as follows:

$$\mathbf{C} = \mathbf{d} \cdot \mathbf{G} \dots\dots\dots (2)$$

with **G** = [**P_{k x (n-k)}** | **I_k**]. The matrix **G** is called a generator matrix of a systematic code.

PARITY-CHECK MATRIX

Matrix **I** is the parity-check matrix for the generator matrix, **G**. Matrix **H** is a matrix with a dimension of (n-k) x n, such that **c.H^T = 0** with 0 indicating all zeros row with a membership of n-k.

This equation can be used to prove the validity of the vector **G**, namely **G.H^T = 0**, with 0 is a zero-dimensional matrix membered k x (n-k). For the matrix **G** such as in the above equation, the matrix **H** can be formulated as follows:

$$\mathbf{H} = [\mathbf{I}_{n-k} \mid \mathbf{P}^T_{(n-k) \times k}] \dots\dots\dots (3)$$

P^T is the matrix transpose of the submatrix **P** from **G**.

SYNDROME

Let **c** = (c₀, c₁, ..., c_{n-1}) is a code word that is transmitted and **r** = (r₀, r₁, ..., r_{n-1}) is a word that is received at the demodulator output. Word **r** can be the same or different from **c**, depending on the noise in the channel. If **r ≠ c**, it can be corrected by using equation **r =**

$\mathbf{c} + \mathbf{e}$, with $\mathbf{e} = \mathbf{r} + \mathbf{c} = (e_0, e_1, \dots, e_{n-1})$. Word \mathbf{e} is called error.

After receiving \mathbf{r} , the decoder starts counting syndrome in order to locate errors, and then corrects them. Syndrome is denoted by \mathbf{s} :

$$\mathbf{s} = \mathbf{r} \cdot \mathbf{H}^T = (s_0, s_1, \dots, s_{n-k-1}) \dots \dots \dots (4)$$

Therefore, the sum of the vector \mathbf{c} and \mathbf{e} , then the equation can be replaced by:

$$\mathbf{s} = (\mathbf{c} + \mathbf{e}) \mathbf{H}^T = \mathbf{c} \cdot \mathbf{H}^T + \mathbf{e} \cdot \mathbf{H}^T \dots \dots \dots (5)$$

with $\mathbf{c} \cdot \mathbf{H}^T = \mathbf{0}$, thus the equation can be written simply be:

$$\mathbf{s} = \mathbf{e} \cdot \mathbf{H}^T \dots \dots \dots (6)$$

This equation shows the relationship between syndrome and error. So, if $\mathbf{s} = \mathbf{0}$, then it is certain that $\mathbf{e} = \mathbf{0}$ or no error. But if $\mathbf{s} \neq \mathbf{0}$, then $\mathbf{r} \neq \mathbf{c}$, which means there error.³

**SIMULATOR
 HARDWARE**

For this simulator, there are two hardware design, i.e. transmitter and receiver. The transmitter contains program that could process matrix \mathbf{G} and user's input and then transmits matrix \mathbf{c} to the other. The receiver receives matrix \mathbf{G} , process it into matrix \mathbf{H} and then receives matrix \mathbf{c} , and also performs error detection and correction. Both of these devices have an identical specification for hardware, but different in the program. Another difference is the position of wireless transmitter and receiver modules. The position of the modules on each device is placed in an order that the wireless transmitter module in one device is faced to wireless receiver module in another device, and vice versa.

Processing module consists of an ATMEGA8 microcontroller. This module uses an 11.59 MHz crystal oscillator. For ATMEGA 8, the available ports are port A, B, C, and D. But the ports that can be used for I/O are port B, C and D. This microcontroller also provides 1 KB Read Access Memory (RAM), and 8 KB Read Only memory (ROM).

The design of this processing module can be seen in Figure 1. External power supply which is used is an adapter that produces an output voltage of 5 VDC with a source of 220 VAC.

Figure 1. Processing Module

**SOFTWARE
 TRANSMITTER**

Figure 2 shows a flow diagram for transmitter. When the transmitter is turned on, the device will wait for input. First, user should input the size and the values of the matrix \mathbf{G} . Figure 3 shows part of program that runs in the transmitter. It appears that there are some subroutines that have been defined in advance, such as subroutines in row 100 (**Cek_Keypad ()**), the subroutine in row 160 (**Konversi_Biner (m, M)**), the subroutine in row 230 (**Input_MatrixG ()**), and subroutine in row 250 (**Tampil_Matrix (m, n, g, G)**). These subroutines are named in accordance with their respective functions. Thus, with just reading the subroutine names, their functions could be understood. For example, subroutine **Input_MatrixG ()** is a procedure which is requesting input from the user for the values of the

matrix **G**.

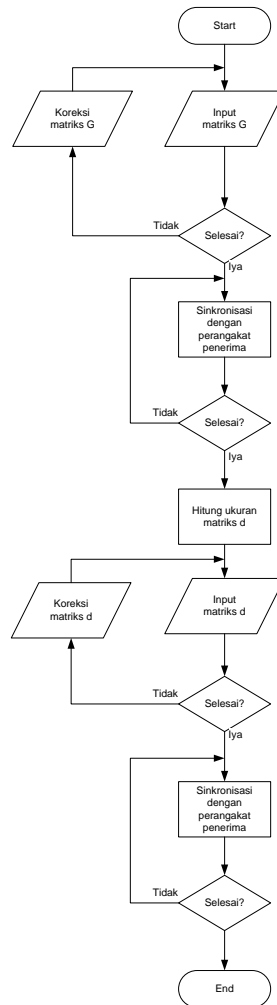

Figure 2. The Flow Diagram of Transmitter

```

100 key=Cek_Keypad();
110 if (key==11) {
120   lcd_clear();
130   lcd_putsf(" MATRIKS G ");
140   lcd_putsf("Ukuran = ");
150   m=Cek_Keypad();
160   Konversi_Biner(m,M);
170   lcd_putchar(m+48);
180   lcd_putsf(" x ");
190   n=Cek_Keypad();
200   Konversi_Biner(n,N);
210   lcd_putchar(n+48);
220   key=Cek_Keypad();
230   if (key==11) Input_MatrixG();
240   key=Cek_Keypad();
250   if (key==11) Tampil_Matrix(m,n,G,g);
260   Hitung_MatrixH();
270   g=1;
280   key=Cek_Keypad();
290   if (key==11) Tampil_Matrix(n-m,n,H,g);
    
```

Figure 3. Program that Runs in the Transmitter

RECEIVER

After synchronization, the values of matrix **G** could be found in array variable **G**

[10][10]. Matrix **G** will be converted into the matrix **H** in accordance with rules that has been defined. In this program, the conversion process can be read in Figure 4.

```

100 for (i=0;i<n;i++) {
110     for (j=0;j<n-m;j++) {
120         P[i][j]=G[i][j];
130     }
140 //Transpose Matriks P
150 printf ("Matriks Pt: \n");
160 for (i=0;i<n-m;i++) {
170     for (j=n-m;j<n;j++) {
180         H[i][j]=P[j-(n-m)][i];
190     }
200 for (i=0;i<n-m;i++) {
210     for (j=0;j<n-m;j++) {
220         if (i==j) H[i][j]=1;
230         else H[i][j]=0;
240     }
    }

```

Figure 4. Matrix G to H Conversion Program

Figure 5 shows flow diagram for receiver. When matrix **H** is formed, system will form Coset table.

RESULTS AND DISCUSSION

Once the program is downloaded to the transmitter and receiver, on the transmitter LCD screen will appear "LINEAR BLOCK CODE" in the first line and "TRANSMITTER MODULE" on the second line. System will be in stand-by state until the user presses the * button.

Then system will prompt user to enter size of the matrix **G**. When entered, LCD screen will go blank. In this position, user should input values of matrix **G** per line. Array is used in this program to define size of matrix **G** (10 x 10) so it defines the maximum size of matrix **G** which is allowed.

When these values have been entered (user still can edit them using arrow keys on the keypad and press the # to delete). User can press * for entering values and rechecking the matrix values with arrows in order to move the screen (size LCD screen is only 2 lines, therefore arrows are needed to move the LCD screen). After checking procedure is completed, user should arrange the position of transmitter and receiver modules so they are in the line of sight (LOS). The recommended distance for transmitter and receiver modules are between 5-10 cm. User can then press the * to start synchronization process. Each bit will be sent with a time delay of 0.5 s. The synchronization process is completed when the LCD screen shows an instruction to enter values of matrix **d**, and LCD screen in receiver shows "MODULE RECEIVER."

User can enter the value of matrix **d** and then press * in transmitter to initiate the process of encoding and sending data. When user wants to make an error, it could be done by presenting an object between transmitter and receiver modules LOS for an interval approximately 0.5 s. Once the data is received by receiver, system will calculate matrix **H**, coset table and matrix **s**.

Detection and correction process will be done accordingly, so that when there is an error, it will be immediately corrected by system. Testing without error shows that system could be perform well. For testing with error, for some carefully selected cases, shows that system also well perform. Therefore it can be concluded that for reception conditions with or without an error, the system has also been able to work well.

Figure 5. The Flow Diagram of Receiver

CONCLUSIONS

ATMEGA8 microcontroller is a microcontroller which is produced by AVR. For ATMEGA family, ATMEGA 8 has the lowest specification. From the tests carried out in this research, it can be concluded that microcontroller with limited capacity is also able to handle the process of sending, receiving, detection and correction of data properly. Even with a memory that only 2 KB for data, system is able to handle various kinds of data which are necessary for process, although some adjustments are necessary.

In the transmission process, data are sent wirelessly between transmitter and receiver modules. Each bit of data is sent with the interval of 0.5 s. This means that the data transfer rate for this process is 2 bps. For data transfer, a value of 2 bps is very low. Although, test showed that system was capable of handling all processes (send, receive, detection and correction) with no errors.
