DKI Jakarta as the center of trade, business, industrial, and other centers also a major metropolitan city. Therefore making the city of Jakarta population for that much needed once, parks of green open space to lower the level of pollution and air pollution. The garden as one means of recreation, a place for social interaction, is a part of the lifestyle and has become a real community needs the city to create a better quality of life and sustainable future. For members of the public, as a connoisseur of the City Park, the existence of the Park will support the creation of a healthy lifestyle.

Various diversity of activities to do in the park environment, it can reduce the level of stress and improve health, as well as the state of the garden to life. Therefore, the diversity of activities at the park city, understood more deeply through the selection of the three case studies of garden city settlements diarea. That is Menteng Park, located in Central Jakarta, Taman Ayodya located in South Jakarta, and Cattleya Park located in West Jakarta.
