

## ***ABSTRACT***

The objective of this research is to analyze the impacts of good corporate governance, profitability ratio, and activity ratio on the performance of transportation-related firms that have been listed on the Indonesia Stock Exchange between 2015 and 2019. The data for the analysis came from the annual report and the financial report. Purposive sampling was used to collect the sample. A total of 18 firms were chosen, with a total of 90 observations. Multiple regression model is used in this study and EViews 12 was used in analyzing the data. The findings of this study suggest that CGC variables such as the board of director meetings, board of director size, and commissioner size do not influence ROA, however independent directors, net profit margin, and total assets turnover have a significant influence on firm performance.

**Keywords:** Good Corporate Governance (GCG), Net Profit Margin, Total Assets Turn Over, Return on Assets (ROA).
