

## **ABSTRACT**

*This study aims to determine the effect of Economic Globalization with point of view from Economic Freedom, Trade Openness, and Foreign Direct Investment on Economic Growth with recent US-China Trade War activity moderating the effect outcome. The research sample uses panel data across seven ASEAN countries which are Cambodia, Indonesia, Malaysia, Singapore, Thailand, Philippines, and Vietnam from 2013-2019. This research method uses Fixed Effect Model (FEM) and Moderated Regression Analysis (MRA) on Eviews 9.0. The result of this study explains that there is positive and significant effect of Trade Openness on Economic Growth, while there is no significant effect between Economic Freedom and Foreign Direct Investment on Economic Freedom. This study also explains that China tariff level is moderating the relationship between Economic Freedom, Trade Openness, and Foreign Direct Investment on Economic Growth on seven ASEAN country. The research concludes that the lower China tariff level applies, the stronger relation between Economic Freedom, Trade Openness, and Foreign Direct Investment on Economic Freedom in the ASEAN country. This phenomenon also supported by conditions in ASEAN countries that are too dependent on China's trade economy.*
