Relations between big five personality and achievement motivation in collage student of undergraduate program. (Meiske Y. Suparman, M.Psi and Fidelis E. Waruwu, M.Sc.). Undergraduate Program in Psychology Tarumanagara University (87 pages, p1-p5).

Achievement motivation is a form of energy that drives a person to increase and optimize the effort to behave in achieving the goal according to his or her standard. This research is aimed at finding the correlation between big five personality and achievement motivation among undergraduate students. Participants were 108 undergraduate students of a university in West Jakarta. Data analysis is conducted by using Spearman. Results indicate that achievement motivation is positively correlated with sub-dimension ideas in openness, sub-dimension competence, order, dutifulness, achievement striving, self-discipline and deliberation in conscientiousness, sub-dimension warmth, gregariousness, assertiveness, activity and positive emotions in extraversion, and sub-dimension straightforwardness and altruism in agreeableness.
