**The correlation between religiosity and achievement motivation in Catholic priest candidates. (Dra. Fransisca Iriani R.D., M.Si., & Dra. Ninawati, MM); Psychology study program, Strata one undergraduate program, Tarumanagara University. (64 pages, P1 - P5, L1 - L48)**

Religiosity means how a person feels bond to his or her religion. Religiosity can be seen from five dimensions i.e., ideology; ritualistic; experiential; intellectuall; and consequential. Achievement motivation is the need for success, for doing better than others, and for mastering challenging tasks. Individual characteristics with high achievement motivation i.e., risk taking of tasks, need of feedback, desire to excel, doing better than others, responsibility, and persistence. The purpose of this study is to find the correlational between religiosity and achievement motivation. This study is also aimed to see relation between dimensions of religiosity and achievement motivation. The subject on this study is Catholic priest candidates. The subject's number in this study is 160 persons. Data has been collected through questionnaire and analyzed using Spearman's correlation. Based on data processed, the result is  $r(160) = 0,150$  dan  $p = 0,058 > 0,05$ . The conclusion, there is no correlation between religiosity and achievement motivation in Catholic priest candidates.

Key words: religiosity, achievement motivation, Catholic priest candidates.
